Requester's Full Name: Sunil Singh Examiner #: 74483 Date: 10/21/02
Art Unit: 3673 Phone Number 308-4024 Serial Number: 09/946,610; 09/962,99
Mail Box and Bldg/Room Location: CPK 5 2714 Results Format Preferred (circle): PAPER DISK E-I

If more than one search is submitted, please prioritize searches in order of need.

Please provide a detailed statement of the search topic, and describe as specifically as possible the subject matter to be searched. Include the elected species or structures, keywords, synonyms, acronyms, and registry numbers, and combine with the concept utility of the invention. Define any terms that may have a special meaning. Give examples or relevant citations, authors, etc., known. Please attach a copy of the cover sheet, pertinent claims, and abstract.

Title of Invention: Molded plastic ramp; Vertical stab tendon bottom connector
Inventors (please provide full names): method for securing and releasing the same; will be
and method of using the same.
Michael Mapp; Joseph W. Pallini Jr., Jerry K. Rhodes, Jason R. Jackson
Roger K. Stone.
Earliest Priority Filing Date: 2/14/1997; 9/27/1996; 09/09/1997.

**For Sequence Searches Only* Please include all pertinent information (parent, child, divisional, or issued patent numbers) along with appropriate serial number.*

Publication Stage :

(A) United States patent

Abstract :

A well treatment tool is installed along the sucker rod string of a well, within the surrounding production tube string. The tool provides for the distribution of a treatment fluid (solvent, etc.) within the fluid being pumped or flowing from the well. The tool receives treatment fluid through the hollow sucker rod string, and distributes

the fluid through a valve which is set at a predetermined pressure. When the treatment fluid pumped down the sucker rod string from the surface exceeds the predetermined opening pressure of the valve, the treatment fluid is distributed into the production tube string through one or more passages in the tool. The present tool may be used simultaneously with well production, with fluid (oil, etc.) rising up the production tube string, carrying the treatment fluid therewith. The treatment fluid is thus distributed throughout the local fluid processing system, including pipelines from the well, any initial treatment operations, and any storage tanks. The present tool is particularly well adapted for the treatment of paraffin buildups within the production tube string of an oil well, but may be used to provide various treatments to other types of wells. The present tool may be used with both pumping wells and flowing (e. g., artesian) wells.
